

in+care eCOMPAS Dashboard

Powered by: COMPAS

Supporting the National Quality Center's campaign to track and monitor patients' in-care retention and key clinical indicators, the eCOMPAS dashboard allows for greater understanding of the population in- and out-of care at a single glance on the web.

All data is presented visually to see key data by population at a glance

See how your whole region is doing or filter by provider. This Dashboard is available to providers as well to see their own data.

Green coloring indicates favorable results. Spot the red areas that need action quickly and easily

Each indicator can be drilled down to a table of data with links to client records so providers can take appropriate follow-up action.

Clinical and process indicators, such as, medical visit frequency, newly enrolled patients, viral load suppression and gap measures are used by clinical providers to measure and benchmark progress in reaching patient care goals and desired clinical outcomes.

Aloha, come and visit the Hawaii exhibit-booth or check out one of the collaborating workshop series and hear how grantees, providers and other partners at national and local levels are helping each other with **web-based tools and solutions**.

"Thanks SO very much for your help, your positive attitude and your expertise! You have no idea how wonderful they all are!"

Grantee Administrator

"I have been "taking" the survey on the e2 site and falling madly in love with it!! I cannot wait to show it to my network! Sadly, my reality is that I must lament that I did not know you sooner!"

HIV Planning Council Coordinator
